

SIADEMY

General Description

Siademy is a web-based academic management platform that centralizes administrative and educational processes into a single system. It allows institutions to efficiently, securely, and accessibly manage students, teachers, enrollments, and grades.

General Objective

To develop a web platform that optimizes and centralizes the academic and administrative processes of educational institutions, providing an efficient, secure, and accessible solution to improve academic management.

Secondary Objectives

- Efficiently manage information related to students, teachers, and guardians.
- Facilitate real-time control of enrollments, attendance, and grades.
- Improve communication and academic organization through integrated administrative modules.

Technologies Used

- HTML5
- CSS3
- JavaScript
- MySQL
- PHP
- jQuery
- Git and Github

System Benefits

- Centralizes and organizes academic and administrative information in a single system.
- Reduces time and errors in processes such as enrollments, attendance, and grading.
- Improves communication, academic monitoring, and accessibility for the entire educational community.

Conclusion

Siademy is a technological solution that improves the academic and administrative management of educational institutions through more organized, efficient, and secure processes. In addition, it helps optimize monitoring and the overall experience of the educational community.

Main idea

Siademy is a web-based academic management platform developed to centralize and optimize administrative and educational processes within institutions, allowing efficient, secure, and accessible management of students, teachers, enrollments, attendance, and grades in order to improve organization and academic monitoring.
